

# React - Behind the Scenes

# React

- When we run the React app ... how is it loaded?

# Loading React App

File: public/index.html

```
<!doctype html>
<html lang="en">
...
<body>
  <div id="root"></div>
</body>
</html>
```

1

File: src/index.js

```
import App from './App';

const root = React.DOM.createRoot(
  document.getElementById('root')
)

<React.StrictMode>
```

Replaces this id with React  
(similar to an “include”)

File: src/app.js

```
return(
  <p>We made our first React Application! </p>
)
```

3

Edit src/App.js and save to reload.

We made our first React application!
